CORE COMPETENCIES

Full-Stack Development | API Development | Microservices | Financial Technology Solutions | System Automation | Distributed Systems | Agile/Scrum | Database Design | AI/LLM Development | Retrieval Augmented Generation | Cloud Architecture

SOFTWARE ENGINEERING PROFESSIONAL

Software Engineer with experience delivering enterprise financial applications, scalable microservices, frontend platforms, observability solutions, and AI-enabled products for Fortune 500 financial and banking companies. Strong full-stack background across Java, React, Node.js, Python, SQL, cloud, and modern web architectures, with a track record of automating manual processes, improving operational efficiency, and building customer-facing experiences

TECHNICAL SKILLS & RELEVANT TOOLS

React | TypeScript | Python | Java | SQL | Node.js | Spring Boot | TanStack Query | Material UI |
Tailwind CSS | Django | Git | Docker | AWS | Postgresql | Splunk | React Native

PROFESSIONAL EXPERIENCE

JPMORGAN CHASE, Wilmington, DE

2023 - 2026

Software Engineer II, Workplace Solutions

Full-stack software engineer delivering enterprise financial technology solutions, with a focus on automation, microservices, observability, and scalable customer-facing applications across JPMorgan Chase's platform ecosystem.

- Established Architected and delivered a plan management system that digitized 357 plan records and 540 client accounts, enhancing regulatory compliance and reducing processing time by 40%.
- Developed a Java/iText microservice for PDF generation, initially delivering Stock Plan reports for bankers and advisors presenting to clients, now extended as the centralized document-rendering service across all internal team applications
- Leveraged GitHub Copilot in VS Code as part of a context-driven development workflow by supplying relevant source files, project specifications, and custom skill instructions to accelerate implementation, debugging, refactoring, and automated test generation across Java and React applications
- Designed a one-click EDGAR delegation request feature that eliminated shared-credential security risks by allowing users to manage SEC filing permissions directly within the application
- Implemented a Flow Tracker observability framework that enriched Splunk logs with step-level workflow telemetry, reducing production issue investigation time by 30% for complex multi-step user flows

- Designed and developed RESTful APIs and backend services using Java and Spring Boot, enabling secure integration between frontend applications, internal services, and enterprise systems.
- Enhanced frontend functionality for the LUCY advisor matching workflow that supported client consent collection and downstream lead conversion to improve business growth
- Delivered self-service credential recovery on an unauthenticated support page with locale-aware deep links, reducing support call volume for pre-login participants.

OCTANE LENDING, (Remote)

2021 - 2022

Software Engineer I, New Verticals

Full-stack software engineer building scalable consumer lending experiences, contributing across frontend, backend, architecture, and Agile delivery to support new products and business verticals.

- Worked as a full-stack engineer on a team of 6, developing consumer-facing technologies for dealer products and new lending verticals
- Created technical documentation, presented feature demos, and hosted lightning talks to increase knowledge sharing across the technology organization
- Served as SCRUM coach for a team of 6 engineers, leading Agile ceremonies, collaborating with product management on sprint planning, and implementing process improvements to increase team productivity and morale
- Developed an RV prequalification experience that enabled expansion into new lending verticals, including an embedded iframe solution for partner websites
- Added joint application support to the consumer prequalification platform and contributed to a major infrastructure refactor, migrating core models from an Application-based to an Applicant-based architecture using Django and SQL.
- Applied test-driven development (TDD) to increase automated test coverage and improve application reliability throughout the development lifecycle.

EDUCATION

Bachelor of Science (BS), Computer Science, Georgetown University, Washington, DC
OCI Generative AI Professional Certificate, 2025 (Oracle)
