

NATHANIEL C. ALLEYNE

ncgalleyne@gmail.com (484)-682-9379

EDUCATION

Georgetown University, COL

Major: Computer Science

Washington, DC

Graduated: May 2021

PROFESSIONAL EXPERIENCE

JPMorgan Chase

(Hybrid)

Software Engineer II - Workplace Solutions

April 2023 – July 2026

- Executed design and development of a 10b5-1 trading plan management system, digitizing 357 plan records and 540 client accounts, replacing a manually distributed Word document with an automated, auditable platform used by the regulatory surveillance team
- Developed a Java/iText microservice for PDF generation, initially delivering Stock Plan reports for bankers and advisors presenting to clients, now extended as the centralized document-rendering service across all internal team applications
- Designed a one-click EDGAR delegation request feature that eliminated shared-credential security risks by allowing users to manage SEC filing permissions directly within the application
- Leveraged GitHub Copilot in VS Code as part of a context-driven development workflow by supplying relevant source files, project specifications, and custom skill instructions to accelerate implementation, debugging, refactoring, and automated test generation across Java and React applications
- Implemented a Flow Tracker observability framework that enriched Splunk logs with step-level workflow telemetry, reducing production issue investigation time for complex multi-step user flows
- Enhanced frontend functionality for the LUCY advisor matching workflow that supported client consent collection and downstream lead conversion to improve business growth

Octane Lending

(Remote)

Software Engineer I

October 2021 – December 2022

- Worked as a full-stack engineer on a team of 6, developing consumer-facing technologies for dealer products and new verticals
- Regularly created documentation, presented demos on new features, and hosted lightning talks to increase knowledge share across the tech organization
- As SCRUM coach, led a team of 6 engineers in all Agile ceremonies, collaborated with product and management to build better sprint plans, and regularly implemented process improvements to increase team productivity and morale
- Developed a new, scalable RV prequalification experience that enabled expansion into new lending verticals, including an embedded iframe solution for partner websites.
- Added joint application support to the consumer prequalification platform and contributed to a major infrastructure refactor, migrating core models from an Application-based to an Applicant-based architecture using Django and SQL.
- Applied test-driven development (TDD) to increase automated test coverage and improve application reliability throughout the development lifecycle.

Chat RSG Bot - Multi-service RAG Chat App (MCP) | Python, [Node.js](#), React, ChromaDB, Docker, AWS

- Built a multi-service chatbot that combines Retrieval-Augmented Generation with integrations to Bitbucket + Jira, enabling semantic search and Q&A across code and project artifacts.
- Implemented a React UI and a CORS proxy to securely route frontend requests to backend services.

TECHNICAL SKILLS AND RELEVANT TOOLS

Programming Languages: Python, Javascript/Typescript (React), Java, SQL

Frameworks/Tools: Docker, React, [Node.js](#), Django, Git, Jira, Docker, Splunk

Cloud/Datastores: AWS (ECS, Lambda, S3, Secrets Manager, Aurora), ChromaDB (vector db)

CERTIFICATIONS

Oracle Cloud Infrastructure

October 2025 - Present

OCI 2025 Generative AI Professional Certificate
